

Assignment

Task 1: Professional Email

Subject: Request for Clarification

Dear Sir,

I hope you are doing well.

I have completed the assigned task. Before proceeding further, I would like to clarify two requirements. Whenever you are available, please let me know a convenient time to discuss them.

Thank you for your time.

Khushee Sonagra

Task 2: Communication Improvement

Message:

Hi Team,

I have completed the assigned work, but I'm currently facing an issue, and it is not working as expected. Could someone please help me review the problem when you have a moment? I would appreciate your assistance.

Thank you!

What was wrong with the original message?

- It was too informal.
- It did not explain what the issue was.
- "ASAP" sounded demanding and lacked politeness.

Why is your version better?

- It uses a professional and respectful tone.
- It clearly explains the situation.
- It politely requests assistance instead of demanding it.

Task 3: Explain Technical Information

The problem is happening because the system is having trouble verifying your login after it tries to refresh your session. Because of this, it cannot process your request, which is why you are seeing an error.

Our team has identified the issue and is working to fix it as quickly as possible. We apologize for the inconvenience and appreciate your patience.

Task 4: Meeting Communication

For the given Scenario my answers would be:

What would you do?

I would wait for a suitable pause in the conversation and then politely mention the requirement that may have been missed.

What would you say?

"Excuse me, I think one important requirement may have been missed. Could we take a moment to review it before we finalize the solution?"

Why?

I would do this because it is important to make sure all requirements are considered. Waiting for the right moment shows respect for the speakers, and mentioning the issue politely helps the team avoid mistakes.

Task 5: Giving Feedback

Hi,

Thank you for sharing the documentation. I reviewed it and had a few suggestions that could make it even better:

- There are a few grammar and spelling mistakes that could be corrected to improve readability.
- Adding screenshots would make the instructions easier to follow.
- Some of the steps seem incomplete, so including a bit more detail would help readers understand the process better.

Overall, it's a good start. With these improvements, the documentation will be much clearer and more useful. Let me know if you'd like me to help review the updated version.

Task 6: Receiving Feedback

Thank you for your feedback. I appreciate you pointing this out. I'll work on making my updates simpler and easier for everyone to understand.

What would you do next?

I would review my updates and replace technical terms with simple, easy-to-understand language. If needed, I would ask for feedback to make sure the message is clear.

How would you improve?

I would use plain language, keep my updates short and organized, and focus on explaining the impact instead of technical details. This will help non-technical stakeholders understand the information more easily.

Task 7: Communication Analysis

1. Not Speaking Confidently During a Presentation

What happened?

During the project presentation, I was nervous and could not speak confidently. Because of this, I could not explain my ideas clearly.

What was the impact?

The audience did not fully understand my points, and I missed the opportunity to communicate my work effectively.

How could it have been handled better?

I could have prepared and practiced my presentation beforehand, spoken slowly, and maintained eye contact. This would have helped me communicate my ideas more clearly and confidently.

2. Not Asking Questions When I Had Doubts

What happened?

While working on a project, I had some doubts but did not ask my teammates or mentor because I thought I would figure them out myself.

What was the impact?

I misunderstood a few requirements, which led to extra work and delayed the project.

How could it have been handled better?

I should have asked questions earlier and clarified the requirements. Clear communication would have saved time and avoided mistakes.

3. Hesitating to Share Ideas

What happened?

During a team discussion, I had a useful idea but hesitated to share it because I was unsure if it was correct.

What was the impact?

The team missed a potential solution, and I lost an opportunity to contribute to the discussion.

How could it have been handled better?

I should have shared my idea respectfully and been open to feedback. Even if it wasn't the final solution, it could have helped the team think of better ideas.
